

# IT Services For Complex Technology Needs

Red Cup IT is purpose-built to provide IT services to mid-sized companies and enterprises.

## Managed IT Services

Red Cup IT is purpose-built to provide a scalable range of Managed IT Services. Unlike other MSPs, we enter relationships with flexibility. We do not come in expecting to take over full operations. Red Cup IT cooperates with our in-house IT partners to provide the right services in the most effective manner.

## Security Solutions

All of our work — MSP services, projects, and skill augmentation — come with a comprehensive focus on security. We consistently provide our clients with cutting-edge security solutions that work effectively. Red Cup IT openly shares our knowledge of security protocols, practices, and procedures with our in-house IT partners and end users.

## Project Delivery

This is where Red Cup IT shines above the crowd of MSP service providers. We will include technical projects in our continuous services contracts or delivered as one-off project work. Our capability to deliver the hard or unique projects that impact both business and IT operations is well-honed.

## IT Skill Augmentation

This is another area of Red Cup IT services that shines above the crowd of MSPs. If our clients need us to provide hard-to-find skills, we will provide them. This includes extending our SME-class expertise across all contracts and projects. We are in business to service all our clients' IT skill needs, not just rank-and-file MSP skills.

## Popular Technologies We Are Expert In

## Red Cup IT's Technology Skill Sets

This is another area of Red Cup IT services that shines above the crowd of MSPs. If our clients need us to provide hard-to-find skills, we will provide them. This includes extending our SME-class expertise across all contracts and projects. We are in business to service all our clients' IT skill needs, not just rank-and-file MSP skills.
